SOUTHERN MANUFACTURING 2010 **10th and 11th February, stand no. L62**

For many years the production technology company TRUMPF has been recognised as the technological market leader for industrial laser and laser systems on a global scale. It applies these products to a range of manufacturing processes but at Southern Manufacturing TRUMPF focuses on just one, laser marking.

The first to introduce industrial diode-end-pumped marking lasers, TRUMPF has made laser marking fast, economical and reliable. Its lasers are now used to mark anything from solar cells to apples and ICs to aircraft parts.

The entire TruMark product range is modular. Standard modules with the fundamental functions needed by every marking system are complemented by those with special features for different tasks. This concept enables TRUMPF to provide cost-efficient and service-friendly markers that are optimally designed to suit the application and that can be upgraded at any time.

Two TruMark laser marking systems represent the range at the show. The TruMark Station 5000 with a TruMark 6020 laser, and the entry level TruMark Station 1000 with a TruMark 3010 laser.
